Article DOI: https://doi.org/10.36713/epra29075
DOI No: 10.36713/epra29075

ABSTRACT

This study examines the lived experiences, coping mechanisms, and support needs of law enforcement officers in Central Visayas, Philippines, who must balance enforcement and humanitarian roles during disaster relief operations. Drawing on qualitative phenomenological methods and semi-structured interviews with twelve officers from the Philippine National Police (PNP) and Bureau of Fire Protection (BFP), the resea rch uncovers both positive and negative dimensions of disaster response work. Findings reveal that professional fulfillment, inter-agency collaboration, and operational recognition motivate officers, while physical exhaustion, compassion fatigue, systemic bureaucratic challenges, and public mistrust present significant barriers. Officers rely heavily on psychological detachment, peer support, and personal values to cope with stress and ethical dilemmas. The study identifies urgent needs for institutionalized mental health programs, standardized multi-agency drills, improved public communication, enhanced resource allocation, and flexible disaster protocols that allow for officer discretion in humanitarian situations. Practical implications highlight the necessity for comprehensive responder support systems, streamlined logistics, specialized training, and formal recognition programs to ensure effective and humane disaster relief. The study recommends that relevant agencies prioritize permanent funding for mental health services, establish logistics hubs, increase hazard pay, and revise rigid policies to promote responder well-being and operational adaptability. These measures will strengthen disaster governance and improve outcomes for both responders and affected communities.

KEYWORDS: *Disaster Response, Law Enforcement, Coping Mechanisms, Policy Implication, Philippines.*

INTRODUCTION

Recent years have seen Central Visayas repeatedly struck by major disasters, including Typhoon Odette in 2021 and the Bohol earthquake in 2013, which have exposed critical limitations in the Philippine disaster response system (Asio, 2020; Philippine News Agency, 2020). These large-scale emergencies have placed immense operational pressures on the Philippine National Police (PNP), which is responsible not only for maintaining peace and order but also for managing evacuations, distributing humanitarian aid, and coordinating multi-agency relief efforts (Philippine News Agency, 2020). The complex realities faced by law enforcement officers who balance enforcement duties with humanitarian responsibilities are often compounded by resource shortages, ethical dilemmas, and evolving community needs, particularly in high-risk areas such as Central Visayas (Asio, 2020).

The Philippines, particularly Central Visayas, has repeatedly been struck by severe disasters, including Typhoon Odette in 2021 and the 2013 Bohol earthquake, exposing significant operational challenges in its disaster management systems (Asio, 2020; Philippine News Agency, 2020). During these crises, law enforcement officers have shouldered dual responsibilities: maintaining law and order and delivering humanitarian aid, often under intense pressure and resource constraints. For example, police in Cebu reported having to manage both crowd control and relief distribution in the aftermath of Typhoon Odette, highlighting the complexity of their roles in disaster settings (Philippine News Agency, 2020).

Law enforcement officers in disaster settings must rapidly adapt to urgent humanitarian needs, limited resources, and procedural constraints, sometimes improvising protocols and coping mechanisms that remain undocumented in official reports (Asio, 2020). These conditions often lead to high stress, ethical challenges, and a need for support systems that policymakers and disaster managers often poorly understand. The lack of empirical research on these lived experiences restricts a comprehensive understanding of how disaster management systems truly function in disaster-prone regions like Central Visayas.

This study specifically aims to address this gap by documenting and analyzing the lived experiences of law enforcement officers in Central Visayas during disaster relief operations, with an emphasis on post-disaster relief distribution. It will: (1) describe how officers balance enforcement and humanitarian roles; (2) identify coping mechanisms and psychological resources; and (3) assess the aspirations and support needs of officers for future disaster scenarios. By generating empirical insights from the frontline, the study seeks to inform improvements to disaster response protocols, training, and support systems. Ultimately, its findings can guide policymakers and practitioners in ensuring more effective, timely,

Volume: 12| Issue: 10| October 2026|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2026: 8.753 || ISI Value: 1.188

and equitable disaster relief, while enhancing officer well-being and performance, fully addressing the intended research objectives and contributing an urgently needed perspective to disaster governance scholarship in the Philippines.

Theoretical Framework

This study's theoretical framework examines how law enforcement officers in Central Visayas balance the enforcement of security measures with the provision of humanitarian aid during disaster relief efforts. Lipsky's Street-Level Bureaucracy Theory (1980) highlights how frontline officers exercise discretion and adapt policies amid unpredictable conditions. The integration of the Philippine Disaster Risk Reduction and Management Act of 2010 (RA 10121) and the DRRM Framework situates officers' actions within a formal policy context, while emphasizing that protocol success depends on frontline interpretation and implementation. This approach provides a strong foundation for understanding and improving disaster management operations and addressing officers' support needs.

Statement of Purpose

This study aims to understand the experiences of law enforcement officers in Central Visayas who must both enforce security and provide humanitarian aid during disaster relief efforts.

Specifically, the study sought answer the following questions:

1. What are the experiences of law enforcement officers as they balance enforcing rules and helping people during disaster relief?
2. What coping mechanisms do officers use to deal with the challenges, stress, and ethical issues they encounter in disaster response and relief distribution?
3. What are the aspirations and support needs of officers to help them perform better and enhance their well-being in future disaster situations?

METHODOLOGY

Design

This study used a qualitative phenomenological approach, allowing key themes to emerge directly from law enforcement officers' real-life experiences during disaster response.

Participants of the Study

Twelve purposively selected officers from the PNP and BFP, all with direct disaster response experience, will participate, ensuring diverse yet focused insights.

Instrument

Semi-structured interviews gathered in-depth, flexible accounts of officers' disaster response experiences.

Data Analysis

Thematic analysis was identified recurring patterns and themes from the interview transcripts, presenting findings with supporting quotes.

Ethical Considerations

The study followed strict ethical standards, prioritizing beneficence, respect, justice, and transparency. Informed consent was obtained from all participants, who were fully informed about the study's purpose, procedures, risks, and their rights, including the option to withdraw at any time. Confidentiality was maintained through data anonymization and careful reporting to protect participants and agencies. The research met all institutional ethical guidelines and was free from conflicts of interest.

Data were gathered through voluntary, semi-structured interviews with law enforcement officers experienced in disaster response, with alternatives such as written reflections available. No monetary incentives were provided, but participants received a summary of findings. Sensitive information was accessed only with authorization and handled confidentially. Debriefing and support resources were offered after interviews. The study was conducted independently as an academic requirement, with all rights retained by the researcher.

RESULTS AND DISCUSSIONS

This chapter presents the interpretation and analysis of the data gathered.

I. Experiences of Law Enforcement Officers in Balancing Rule Enforcement and Humanitarian Aid

1. Positive Experiences

Professional Fulfillment and Civic Pride in Humanitarian Action. This theme embodies the profound sense of vocational validation, altruistic satisfaction, and internal transformation experienced by frontline operatives during disaster management and relief operations. For public servants in the uniformed services, a disaster environment alters the standard occupational paradigm; tasks are no longer viewed merely as bureaucratic or legal mandates, but as high-stakes humanitarian missions.

The narrative testimonies collected by us, the researchers, strongly validate this thematic framework. For instance, **Informant 1** detailed a scenario where they packed relief materials through the night:

> *"Katong higayon nga nagbuntagay mi og pack sa relief goods para ipadala sa mga biktima sa kalamidad. Bisan pa man kon grabe ang kakapoy sa lawas, nalingaw mi ug positibokaayo among huna-huna kay kabalo mi nga dako kadto og tabang para sa isig ka-Filipino."* (IDI1:SS3). (That time when we spent the entire night packing relief goods to be sent to disaster victims. Even though our bodies were extremely exhausted, we enjoyed it and our mindset remained very positive because we knew it was a massive help to our fellow Filipinos). (IDI1:SS3).

This explicitly demonstrates how immediate bodily exhaustion is overridden by a positive mindset when the responder recognizes that their labor directly relieves the suffering of fellow citizens. This aligns with street-level bureaucracy theory, which emphasizes how frontline workers find

ISSN (Online): 2455-3662
EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal
Volume: 12| Issue: 10| October 2026|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2026: 8.753 || ISI Value: 1.188

intrinsic motivation when directly serving the public interest (Lipsky, 1980).

Similarly, **Informant 3** highlighted the symbolic value of an official uniform on the ground, stating that their deployment went beyond material assistance:

> *"Ang pagka-estasyon namo didto aron moserbisyo sa katawhan, dili lang sa pinansyal o materyal nga aspeto, kundi ang pagpabati gyud kanila nga ang gobyerno anaa... Diha ko nalamdagan nga dako diay mig gamit isip public servants."* (IDI3:SS3). (Our being stationed there to serve the people was not just about the financial or material aspects, but making them truly feel that the government is present, ready to help, and ready to protect them. It was then that I realized we are of great use as public servants) (IDI3:SS3).

This reflects how field presence projects a protective, responsive governance model to a traumatized community, reinforcing the officer's own sense of societal worth. Such actions demonstrate the dual role envisioned in national disaster risk reduction and management frameworks (Republic Act No. 10121, 2010).

The alignment between personal ethics and structural duty is further emphasized by **Informant 2**, who noted:

> "*Na-align kini sa akong personal nga baruganan nga kinahanglan protektahan ug unahon gyud ang mga huyang, mga bata, ug kadtong walay ikasarang sa panahon sa grabeng kalamidad."* (IDI2:SS12). (This aligned with my personal principle that we must protect and prioritize the vulnerable, the children, and those who have nothing during times of severe disaster).

Ultimately, this theme reveals that humanitarian action provides responders with a profound sense of purpose that transforms their duty into a calling, proving that the psychological rewards of compassion and public service are powerful tools for overcoming physical adversity. This congruence between personal values and professional duties is known to significantly cushion first responders against ethical distress (Hessels et al., 2020).

2. Inter-Agency Synergy and Collaborative Success. This theme center on the operational efficiency, mutual confidence, and structural strength generated by seamless horizontal integration and inter-agency collaboration. Disaster environments present complex challenges that overwhelm the resources of any single institution. Success requires moving away from isolated, agency-specific operations and adopting integrated, multilateral response frameworks.

> *"Nakigtambayayong mi sa Philippine Coast Guard (PCG ug PNP alang sa seguridad ug rescue transport. Tungod sa maoy tinabangay, mas dako ang akong garbo nga bahin ko samaoy malampusong operasyon."* (IDI2:SS13). (We collaborated with th Philippine Coast Guard (PCG) and PNP for security and rescu transport. Because of that cooperation, I feel greater pride in beir part of such a successful operation).

The informant emphasizes how structured partnerships across sea and land forces foster institutional pride, turning a complicated safety and transport mission into a shared success. Research on multi-agency emergency management underscores that collaborative networks eliminate duplication of effort, streamline logistics, and enhance overall operational safety in chaotic post-disaster environments (Kapucu et al., 2021; Waugh & Streib, 2006).

> *"Ako ang nakig-coordinate sa mga non-government organizations (NGOs) ug foreign donors. Ang garbo naggikan sa pagtan-aw nga ang nagkalain-laing sektor nagkahiusa ubos sausa ka command alang sa kaayohan."* (IDI5:SS13). (I was the one coordinating with non-government organizations (NGOs) and foreign donors. The pride came from seeing different sectors unite under one command for the common good).

This informant highlights the administrative satisfaction of linking civil organizations and international donors with local governance, showing that a unified command structure makes large-scale coordination efficient. Scholars note that civil-military and multi-sectoral integration under a centralized Incident Command System (ICS) significantly improves resource distribution and operational adaptability during catastrophic events (Nowell et al., 2018; Comfort, 2007).

> *"Konduktibo kaayo among teamwork. Akong mga kauban sa luyo sa truck maoy mata nako sa blind spots samtang nag-drive ko sa tunga sa baha ug kagubot."* (IDI8:SS13). (Our teamwork was very conducive. My colleagues at the back of the truck served as my eyes for blind spots while I was driving through the middle of the flood and chaos).

3. Operational Competence and Institutional Recognition. This theme captures the psychological boost and renewed motivation frontliners experience when their specialized skills and administrative strategies are validated. Whether through formal institutional commendations or public appreciation in local media, recognition reassures personnel that their sacrifices are seen, valued, and essential to maintaining public order.

> *"Gi-post sa Facebook page ug local media sa komunidad ang larawan sa among team samtang nagtrabaho taliwala sa ulan. Nakapatandog kadto sa akong kasingkasing kay nakita nako nga gi-apreciate ug nakita sa publiko ang tinuod nga sakripisyo sa BFP personnel."* (IDI3:SS11). (A photo of our team working in the middle of the rain was posted on the

ISSN (Online): 2455-3662
EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal
Volume: 12| Issue: 10| October 2026|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2026: 8.753 || ISI Value: 1.188

community's Facebook page and local media. That touched my heart because I saw that the public appreciated and witnessed the true sacrifice of BFP personnel)

The informant points out that media documentation humanizes the uniform by showing the community the harsh conditions under which they work, which deeply touches their morale. External validation via public communications and social media has been shown to bolster responder morale, counter psychological fatigue, and enhance institutional legitimacy (Sorensen et al., 2020; Wendling et al., 2013).

> *"Sa dihang nakita nako sa balita ug sa local reports nga ang mga dapit nga among gi-respondhan ug gicclear nakadawat gyud sa saktong pagtagad, tabang, ug proteksyon sa gobyerno."* (IDI6:SS9). (When I saw on the news and local reports that the areas we responded to and cleared actually received proper attention, help, and protection from the government).

This informant derives professional validation from seeing their area clearance operations translate directly into tangible, organized government assistance and security for the victims.

> *"Gihatagan ko og plaque gikan sa Local Government Unit isip Outstanding Operational Commander sa panahon sa kalamidad." (IDI9:SS9). (I was given a plaque by the Local Government Unit as an Outstanding Operational Commander during a calamity).*

Formal institutional recognition, such as plaques and awards, serves as a crucial non-monetary incentive that reinforces organizational loyalty and professional self-efficacy among law enforcement officers engaged in high-stress disaster response (Gau, 2014; Willis et al., 2010).

II. Negative Experiences

1. Severe Physical Depletion and Secondary Traumatic Stress. This theme highlights that first responders, administrative staff, and management personnel operate under extreme physical pressure during disasters. This theme details the heavy physical exhaustion caused by working extended shifts with minimal rest, combined with the emotional toll of processing secondary trauma. The mental burden is heavily compounded by "compassion fatigue," as personnel absorb the intense grief, panic, and loss of the affected populations.

> *"Ang 'Compassion Fatigue' o ang mental exhaustion sa pagsige og paminaw sa mga estorya sa kaguol, pagkawala, ug kamatayon gikan sa mga biktima, ug ang pagdumala sa toxic/negative comments sa internet sa tunga sa krisis."* (IDI11:SS27)."Compassion Fatigue' or the mental exhaustion from constantly listening to stories of grief, loss, and death from the victims, and managing toxic/negative

This verbatim testimony directly reflects the psychological weight carried by frontline personnel. Extensive occupational research confirms that disaster responders exposed to prolonged trauma, death, and human suffering are exceptionally vulnerable to secondary traumatic stress and compassion fatigue, which frequently manifest alongside physical exhaustion (Adams et al., 2008; Figley, 2002).

2. Systemic Friction Between Rigid Regulations and Immediate Human Need. This theme captures that during crises, responders often experience deep ethical dilemmas when rigid bureaucratic protocols clash with immediate, lifesaving humanitarian needs. This systemic friction forces personnel into intense internal conflict as they try to balance accountability to strict government rules with basic human empathy and compassion.

> *"Ang lisod katong naay guidelines nga usa ra ka relief pack kada pamilya base sa opisyal nga lista, apan naay pamilya nga dako kaayo og miyembro unya nangayo og dugang kay kulang gyud para nila. Stressful kaayo kay kinahanglan sundon ang lagda sa gobyerno pero naluoy sab ka sa ilang.* (IDI1:SS15).*"The difficult part was when there were guidelines stating only one relief pack per family based on the official list, but there was a family with a very large membership asking for more because it really wasn't enough for them. It was very stressful because you have to follow government rules but you also pity their situation."*

This experience exemplifies the classic friction inherent in public sector frontline work during emergencies. Scholars of public administration note that "street-level bureaucrats" routinely face severe moral distress when rigid administrative mandates prohibit them from tailoring solutions to acute human need on the ground (Lipsky, 1980; Maynard-Moody & Musheno, 2003).

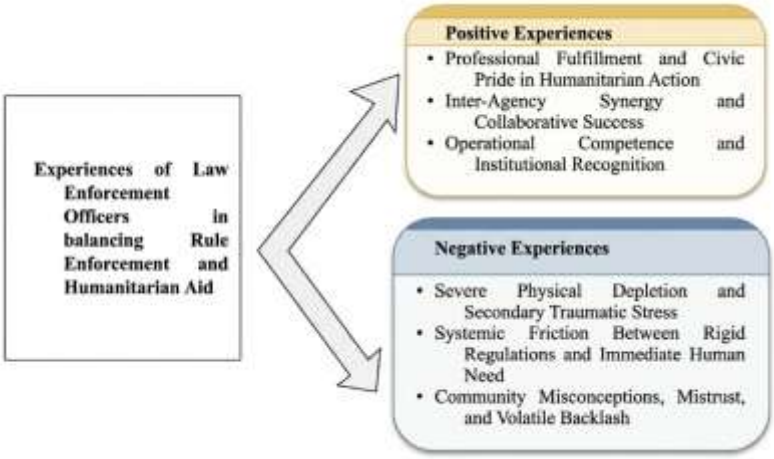
3. Community Misconceptions, Mistrust, and Volatile Backlash. This theme explains that communication breakdowns, intense panic, and resource scarcity in disaster zones often fuel public misunderstandings. Tactical decisions made by responders are frequently misconstrued by an emotional, stressed public as corruption, favoritism, or neglect. This mismatch in perception can lead to open hostility, verbal abuse, and severe online backlash, leaving responders feeling isolated and vulnerable.

> *"Katong gibadlong nako ang nagdala og peke nga stub. Ang tibuok pundok nanalipod kaniya ug gi-boo-an ko nila sa unahan. Isip bag-o sa serbisyo, nakapahadlok ug nakapahimokadto nako nga makasinati og grabe nga trauma ug anxiety..."* (IDI6:SS21)*"That time I called out someone bringing a fake stub. The entire crowd defended him and booed me. As a newcomer in the service, it was terrifying and caused me to experience severe trauma and anxiety."*

The public hostility described here is a documented phenomenon in post-disaster environments where extreme resource scarcity and heightened trauma trigger volatile public

ISSN (Online): 2455-3662
EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal
Volume: 12| Issue: 10| October 2026|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2026: 8.753 || ISI Value: 1.188

behavior. Studies on disaster sociology indicate that communication failures and administrative delays often erode public trust, leading distressed community members to scapegoat frontline officers who represent state authority (Drabek, 2010; Rodriguez et al., 2007).



II. Coping Mechanisms (Challenges, Stress, and Ethical Issues)

1. **Psychological Detachment and Cognitive Reframing**. This theme explores how disaster responders protect their mental health and remain effective in high-pressure situations by practicing psychological detachment and cognitive reframing. Psychological detachment means consciously separating one's own emotions from the distressing events and reactions they witness during disaster response. By doing so, responders avoid internalizing the anger, panic, or harsh words directed at them by affected community members, recognizing that such reactions are products of trauma and stress rather than personal attacks.

> *"Mo-inhale ug exhale lang ko og lawom, unya huna-hunaon nako pirme nga ang ilang kasuko o hait nga pulong dili personal batok nako, kundi naggikan lang gyud sa trauma, kataranta, ug kagutom sa ilang sitwasyon."* (IDI1:SS19).*"I just inhale and exhale deeply, then always remind myself that their anger or harsh words are not personal against me, but simply stem from the trauma, panic, and hunger of their situation."*

This psychological adjustment mechanism is well-supported in occupational health and disaster management literature. Cognitive reframing allows frontline operatives to attribute public hostility to situational panic rather than interpersonal conflict, which reduces emotional exhaustion (Sonnentag & Fritz, 2015; Jamieson et al., 2018).

2. Interpersonal Camaraderie and Peer Support Systems

When formal mental health programs are unavailable or insufficient, responders rely heavily on peer-to-peer camaraderie and informal support networks. Sharing experiences, using dark humor, talking through stress, and working closely together create a vital space for emotional release among colleagues who understand the job's unique demands.

> *"Mag-estoryahay mi sa akong mga kauban (peer-to-peer venting) inig human sa duty, mag-komedya gamay aron mogaan ang paminaw, ug manawag sa pamilia sa cellphone kung naay signal..."* (IDI7:SS28).*"We talk to our colleagues (peer-to-peer venting) after duty, joke a bit to lighten the feeling, and call family on the cellphone if there is a signal to gain strength."*

Studies on emergency service personnel consistently show that peer support systems and social sharing function as primary coping mechanisms in high-stress occupations (Peñalba et al., 2008; Stanley et al., 2019).

3. Spiritual Anchoring and Value-Driven Resolve

This theme explains that when physical and emotional resources are entirely drained, responders fall back on spiritual anchoring and deeply held personal values. A commitment to service, religious faith, and a clear sense of duty provides the inner strength and moral clarity needed to keep moving forward under grueling conditions.

> *"Ang akong personal value mao ang 'Serbisyo bago Sarili.' Akong gibilin akong kaugalingong pamilya nga gi-baha pud ang balay aron lang matuman akong duty sa komunidad."* (IDI8:SS12). *"My personal value is 'Service before Self.' I left my own family whose house was also flooded just to fulfill my duty to the community."*

This internal commitment reflects the deep-seated public service motivation (PSM) that drives emergency personnel to prioritize societal duty over personal hardship (Perry & Wise, 1990; Vandenabeele, 2007).

III. Aspirations and Support Needs for Future Disaster Situations

1. Institutionalization of Well-being and Mental Health Recovery Protocols

Relying solely on informal coping strategies is not enough to protect responders from long-term secondary trauma. Informants highlight an urgent need for institutionalized mental health frameworks, calling for mandated post-operational debriefings, professional counseling, and structured rest cycles to protect the long-term well-being of the workforce.

> *"Ang presensya sa usa ka psychologist, peer counselor, o guidance counselor gikan sa BFP human sa operasyon aron matabangan kaming mga batan-on nga nakasinati og grabe nga trauma, stress ug anxiety panahong human sa field"* (IDI3:SS2)*"The presence of a psychologist, peer counselor, or guidance counselor from the BFP after operations to help us younger ones who experience severe trauma, stress, and anxiety."*

Occupational psychological health literature strongly advocates for institutionalized post-incident psychological care. Studies indicate that structured psychological debriefings, professional counseling, and peer support programs embedded within public safety agencies significantly lower trauma-related psychological distress and early-career turnover (Boffa et al., 2017; Horn et al., 2020; Haugen et al., 2012).

2. Standardization of Multi-Agency Simulation Drills and Unified Public Communication

To minimize delays and reduce tension on the ground, responders advocate for structural improvements in the way agencies coordinate with one another and with the public. This includes standardizing joint simulation drills to clarify command structures before emergencies, as well as developing unified communication tools to manage public expectations and reduce misunderstandings.

> *"Gusto nako nga naay regular ug dungan nga simulation exercises o drills kauban ang BFP, PNP, ug LGU aron mas mapalambo pa ang koordinasyon ug malikayan ang kalangan..."* (IDI1:SS32)*."I want regular and simultaneous simulation exercises or drills with the BFP, PNP, and LGU to further improve coordination and prevent delays."*

Inter-agency coordination research emphasizes that multi-agency simulation exercises are essential for establishing unified command systems, clarifying operational roles, and reducing friction during actual crises (Kapucu, 2008; Berlin & Carlström, 2015).

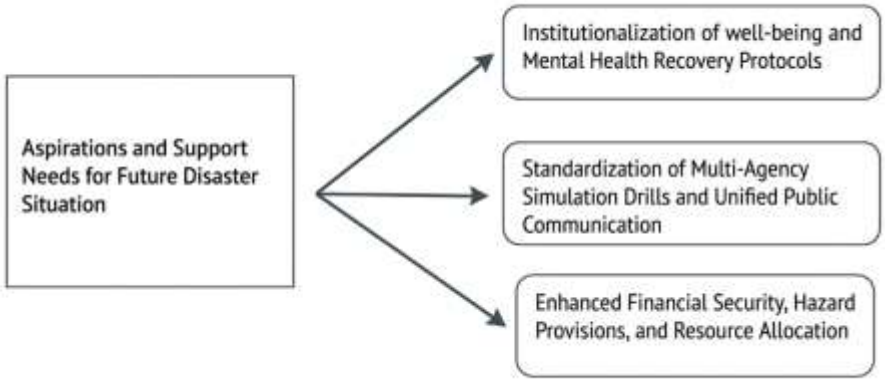
3. Enhanced Financial Security, Hazard Provisions, and Resource Allocation

This theme focuses on the physical and financial resources needed to keep responders safe and effective. Informants emphasize the need for adequate hazard pay, comprehensive health insurance, and proper protective equipment. They also call for streamlined logistics systems to ensure relief supplies are stored and distributed efficiently without bureaucratic delays.

> *"Hinaot nga ang LGU ug ang PNP leadership maghimo og permanenteng pre-disaster logistics hub sa matag distrito aron dili na ang local police stations ang maghuot isip temporary warehouses."* IDI7:SS31)*."Hopefully, the LGU and the PNP leadership will establish a permanent pre-disaster logistics hub in every district so that local police stations will no longer be crowded as temporary warehouses."*

Disaster logistics and public administration literature highlighted pre-positioning supply networks and dedicated logistics hubs as critical components of efficient emergency governance (Apte & Yoho, 2011; Kovács & Spens, 2007).

ISSN (Online): 2455-3662
EPRA International Journal of Multidisciplinary Research (IJMR) - Peer Reviewed Journal
Volume: 12| Issue: 10| October 2026|| Journal DOI: 10.36713/epra2013 || SJIF Impact Factor 2026: 8.753 || ISI Value: 1.188



IMPLICATIONS

The PNP, BFP, and LGUs should make comprehensive mental health programs a standard part of disaster response, providing regular psychological debriefings, access to counselors, peer support, and immediate mental health care after major disasters, all supported by permanent funding and integrated protocols. Regular joint drills among all response agencies, including the PCG and NGOs, should be held to improve coordination, clarify roles, and strengthen inter-agency communication and unified command structures.

Effective information dissemination requires up-to-date communication tools, specialized training for frontline officers in crisis and public communication, and unified public messaging to prevent confusion and misinformation. LGUs, with PNP and BFP, should create permanent logistics hubs for relief supplies and invest in durable protective gear to ensure responder safety. Agencies must also advocate for hazard pay, health insurance, and emergency welfare funds, while implementing recognition programs to honor outstanding responders and foster public trust. Finally, disaster response protocols should allow flexibility and officer discretion to meet urgent humanitarian needs efficiently and compassionately.

RECOMMENDATIONS

It is recommended that the PNP, BFP, and LGUs in Central Visayas, alongside national agencies and stakeholders, take immediate steps to strengthen disaster response by prioritizing responder well-being, operational efficiency, and public trust. Agencies should establish comprehensive, permanently funded mental health support, conduct regular multi-agency drills, and invest in modern communication tools and specialized training. Permanent logistics hubs and streamlined resource management are essential for swift relief operations. Enhancing responder security through hazard pay, health insurance, and emergency welfare funds is also advised, along with formal recognition programs for outstanding service. Finally, disaster response policies should be revised for greater flexibility and officer discretion, allowing compassionate action during urgent humanitarian situations. These measures will help build a more resilient and effective disaster response system for both responders and communities.
