

TEACHING CHALLENGES OF HOME ECONOMICS AMONG NON-SPECIALIST TEACHERS IN SECONDARY SCHOOLS IN LAOANG, NORTHERN SAMAR

Angelica A. Cerbito

MATVE-HET

ABSTRACT

This study investigated the teaching challenges of non-specialist teachers handling Home Economics in secondary schools in Laoang, Northern Samar. Specifically, it examined the demographic profile of non-specialist teachers in terms of age, gender, educational attainment, field of specialization, and years of teaching experience; the challenges encountered in teaching Home Economics with respect to pedagogical content knowledge, use of specialized equipment, confidence and professional identity, and professional development needs; and (the relationship between demographic profiles and teaching challenges.

Data were gathered from 20 respondents using descriptive statistics and pearson r analysis. Results revealed that most teachers were in mid-age groups, predominantly female, and held bachelor's degrees, but half specialized outside Home Economics. Findings showed that teachers faced significant challenges in content mastery, handling specialized equipment, and maintaining confidence and professional identity. Professional development needs were consistently high, reflecting teachers' recognition of their limitations and desire for training. Chi-square tests indicated no significant relationship between demographic variables such as age, gender, educational attainment, and years of teaching experience with the challenges encountered. However, field of specialization showed near-significant results, suggesting that specialization may influence difficulties in content mastery, equipment use, and confidence.

The study concludes that the challenges faced by non-specialist teachers are systemic rather than personal, rooted in the mismatch between specialization and subject assignment. Addressing these issues requires systemic reforms in staffing policies, provision of adequate resources, and targeted professional development programs. By strengthening teacher competence and confidence, Home Economics can fulfill its vital role in equipping students with essential life skills and supporting community development.

INTRODUCTION

Background of the Study

Home Economics (HE) is a vital subject in the Technical-Vocational-Livelihood (TVL) track of the Philippine K–12 curriculum. It equips learners with practical skills in food preparation, clothing, household management, and entrepreneurship, preparing them for both livelihood opportunities and personal life management. The effectiveness of HE instruction depends largely on the teacher's expertise and specialization.

In many secondary schools, however, teachers whose majors are outside Home Economics are assigned to teach HE subjects due to staffing shortages. This mismatch between specialization and teaching assignment often results in challenges such as limited pedagogical content knowledge, difficulty in handling specialized equipment, and reduced confidence in teaching practical skills. These challenges may affect instructional quality and student learning outcomes.

Studies have documented similar issues in technical-vocational education. Amine and Evangelio (2021) found that non-specialized teachers struggle with knowledge transfer and adapting to skill-based instruction. Salvador (2022) emphasized that teaching outside one's specialization remains a pressing concern in Philippine TVE programs. UNESCO-UNEVOC (2020) highlighted globally that teacher expertise is central to effective vocational training, and mismatches in specialization can negatively affect student outcomes.

Given this context, it is important to investigate the teaching challenges faced by non-specialist teachers in delivering Home Economics in Laoang, Northern Samar, where secondary schools rely heavily on non-specialist teachers for TVL subjects.

Statement of the Problem

This study seeks to answer the following questions:

1. What are the demographic profiles of non-specialist teachers teaching Home Economics in secondary schools in Laoang, Northern Samar?

- a. Age
 - b. Gender
 - c. Educational Attainment
 - d. Major/Field of Specialization
 - e. Years of Teaching Experience
2. What challenges do non-specialist teachers encounter in teaching Home Economics in terms of:
- Pedagogical content knowledge
 - Use of specialized equipment
 - Confidence and professional identity
 - Professional development needs
3. Is there a significant relationship between non-specialist teacher demographic profile and challenges of non specialist teachers.

METHODS

Research Design

This study will use a descriptive-correlational quantitative design to measure challenges and examine relationships between variables.

Participants

The sample will consist of 20 teachers from secondary schools in Laoang, Northern Samar, including both HE specialists and non-HE specialists assigned to teach HE subjects. Stratified random sampling will ensure representation of both groups.

Data Collection

Surveys will be distributed to participants, with responses collected anonymously.

Data Analysis

- Descriptive Statistics (mean, frequency, percentage) to demographic profile and teaching challenges.
- Pearson Correlation to examine the relationship between non-specialist teacher demographic profile and challenges of non specialist teachers.

RESULTS

Table 1 presents the data on demographic profile both non specialist and home economics teacher. Age: The majority (40%) are in the mid-range age group, suggesting a workforce that is neither too young nor nearing retirement. This balance implies stability but also highlights the need for continuous training.

Gender: With 50% in one dominant gender category, the teaching force reflects traditional patterns in Home Economics, though diversity is present.

Educational Attainment: Most teachers hold bachelor's degrees, with nearly half pursuing graduate studies. However, only 5% reached the highest level, indicating limited advanced specialization. Years of Teaching Experience: The distribution is balanced, with both new and experienced teachers represented. This mix suggests varied levels of confidence and adaptability, but not necessarily subject mastery.

Field of Specialization: Half of the teachers specialize outside Home Economics, confirming the mismatch between training and teaching assignment.

Table 1. Demographic Profile

Variable	Categories	Frequency	Percentage	Interpretation
Age	22-30	6	30.0%	A significant portion are in the youngest group. Few belong to the second age bracket Largest group, indicating mid-range age teachers dominate Some are in the oldest bracket.
	31-40	2	10.0%	
	41-50	8	40.0%	
	51 above	4	20.0%	
Gender	Male	6	30.0%	Minority gender group represented Majority gender group represented
	Female	14	70.0%	
Educational Attainment	Bachelors	10	50.0%	Half hold bachelor’s degrees Nearly half have higher units/graduate studies Very few reached the highest attainment
	Masters	9	45.0%	
	Doctorate	1	5.0%	
Years of Teaching	1 -3 years	6	30.0%	Many are relatively new teachers. Few have moderate experience. Another large group with mid-level experience. Quarter are highly experienced.
	4-6 years	3	15.0%	
	7-10 years	6	30.0%	
	11 years+	5	25.0%	
Field of Specialization	Non-HE	10	50.0%	Half specialize outside Home Economics The rest are spread across other fields.
	HE-Specialist	10	50.0%	

Table 2 A shows the overall data.” I can explain HE topics clearly to students” scores are low (means mostly between 1.7–2.7. This indicates that non-specialist teachers lack deep content knowledge in Home Economics, relying more on theory than practice. This implies students may not acquire practical life skills effectively. Professional development programs focusing on subject-specific pedagogy are urgently needed

Table 2 A. Pedagogical Content Knowledge

Item	Mean	SD	Interpretation
1. I feel confident teaching Home Economics concepts.	1.90	0.788	Low mastery of subject matter
2. I have sufficient knowledge of HE subject matter.	2.10	0.852	Slightly better, but still limited.
3. I can explain HE topics clearly to students	1.70	0.865	Very low confidence in teaching technical content
4. I find it difficult to prepare lesson plans for HE.	2.10	0.852	Moderate struggle in lesson delivery
5. I rely heavily on external resources (e.g., internet, textbooks) to teach HE.	2.75	0.910	Highest among PCK items, but still below strong mastery

Table 2.B Means range from 2.0 to 3.55, with “I struggle with operating specialized HE equipment” and “lack of equipment hinders my ability to teach HE effectively” showing the highest values. This suggests that operating specialized equipment (e.g., sewing machines, kitchen tools) is the most pressing challenge. Without proper training and resources, teachers cannot deliver practical lessons. Schools must invest in equipment training and maintenance.

Table 2 B. Use of Specialized Equipment

Item	Mean	SD	Interpretation
6. I can effectively demonstrate the use of HE tools and equipment.	2.45	0.826	Moderate difficulty using equipment
7. I feel comfortable handling HE laboratory materials.	2.35	0.933	Similar moderate struggle.
8. I struggle with operating specialized HE equipment.	3.35	0.671	High difficulty — strongest challenge
9. I need assistance when conducting practical HE lessons.	2.00	0.918	Low confidence in handling tools.
10. Lack of equipment hinders my ability to teach HE effectively	3.55	0.510	Very high difficulty — most critical issue.

Table 2. C Scores are generally low to moderate, indicating that teachers feel insecure about teaching Home Economics, as it is outside their specialization.

This implies that affects motivation and classroom delivery. Strengthening professional identity through recognition and support can improve confidence.

Table 2 C. Confidence and Professional Identity

Item	Mean	SD	Interpretation
11. I feel competent teaching HE despite my specialization.	1.90	0.788	Low confidence
12. I sometimes feel inadequate compared to HE specialists.	2.30	0.733	Slightly better, but still weak
13. Teaching HE affects my confidence as a teacher.	2.00	1.08	Low professional identity
14. I am motivated to improve my HE teaching skills.	2.85	0.875	Moderate confidence.
15. I believe my non-HE background limits my teaching effectiveness	2.60	0.821	Moderate, but not strong

Table 2. D shows all items are above 2.8, with Continuous training is necessary for effective HE instruction at 3.30. This shows teachers strongly recognize their need for training and support. This implies capacity-building programs, workshops, and continuous professional development are essential to address gaps in knowledge and skills.

Table 2 D. Professional Development Needs

Item	Mean	SD	Interpretation
16. I need more training to teach HE effectively.	3.10	0.641	Strong need for training.
17. I would benefit from workshops on HE pedagogy.	3.05	0.686	Consistently high demand
18. Mentoring from HE specialists would improve my teaching.	2.85	0.813	Moderate to high need.
19. I am willing to attend professional development programs for HE.	2.80	0.523	Moderate need.
20. Continuous training is necessary for effective HE instruction	3.30	0.865	Highest demand for professional development.

Table 2. E shows teachers perceive themselves as moderately effective, with item 5 “I believe I contribute positively to student learning in HE” scoring highest. However, effectiveness is limited by lack of specialization and resources. This implies teachers try to adapt, their effectiveness is constrained. Support systems and mentoring from specialists could enhance teaching outcomes.

Table 2 E. Perceived Teaching Effectiveness

Item	Mean	SD	Interpretation
1. My students understand the lessons I teach in HE.	2.75	0.851	Moderate effectiveness
2. I can engage students in practical HE activities.	2.90	0.788	Slightly higher confidence.
3. My teaching methods in HE are effective.	2.90	0.718	Consistent moderate perception.
4. Students perform well in HE under my instruction.	2.45	0.605	Lower effectiveness
5. I believe I contribute positively to student learning in HE	3.15	0.671	0.671

Table 3 Relationship Between Demographic Profile and Challenges

Gender: Across all domains (PCK, USE, CPI, PDN, TES), p-values ranged from .253 to .661, all above the 0.05 threshold. This indicates no significant relationship between gender and teaching challenges.

Age: P-values ranged from .193 to .669, again all above 0.05. Thus, age does not significantly influence the challenges encountered. Educational Attainment: P-values ranged from .273 to .896, showing no significant relationship between educational attainment and teaching challenges.

Years of Teaching Experience: P-values ranged from .121 to .599, all above 0.05. This means experience does not significantly reduce or increase the challenges faced.

Field of Specialization: P-values ranged from .053 to .277. While most are above 0.05, the values for PCK (.072), USE (.086), CPI (.091), and PDN (.053) are close to the threshold, suggesting a near-significant relationship. This implies that specialization may influence challenges more than other demographic factors, though results are not statistically conclusive. This implies Gender, age, educational attainment, and years of teaching experience show no significant relationship with challenges. This means difficulties are systemic rather than personal. Field of specialization shows near-significant results, suggesting that teachers outside technical fields struggle more with content mastery, equipment use, and confidence.

Staffing policies should prioritize assigning Home Economics classes to teachers with relevant backgrounds. Professional development must be targeted to non-specialists, especially those from unrelated fields. Since challenges are consistent across demographics, training programs should be inclusive and equitable.

Table 3. Relationship Between Demographic Profile and Teaching Challenges

Demographic Variable	Challenge Domain	χ^2 Value	p-value	Decision	Interpretation
Gender	All domains	13.167-17.656	.253-.661	Not Significant	Gender does not influence challenges.
Age	All domains	20.486-33.111	.193-.669	Not Significant	Age does not affect challenges.
Educational Attainment	All domains	7.870-16.685	.273-.896	Not Significant	Attainment does not reduce challenges.
Years of Teaching	All domains	24.556-35.756	.121-.599	Not Significant	Experience does not reduce challenges.
Field of Specialization	PCK, USE, CPI, PDN	13.000-15.333	.053-.091	Significant	Specialization may influence challenges.

DISCUSSION

The findings of this study reveal a complex picture of the teaching of Home Economics in secondary schools in Laoang, Northern Samar. The demographic profile (Objective 1) shows that most teachers are in their mid-career stage, predominantly female, and academically qualified with bachelor’s degrees. However, half of them specialize in fields outside Home Economics. This mismatch between specialization and teaching assignment is the foundation of the challenges identified in Objective 2.

The challenges encountered by non-specialist teachers are systemic and multifaceted. Pedagogical Content Knowledge (PCK) scores were low, indicating limited mastery of technical content. This is expected given that most teachers were trained in other disciplines. As a result, lessons often lean toward theoretical discussions, depriving students of the experiential learning that Home Economics requires. This has implications for student outcomes, as practical skills such as cooking, sewing, and household management are essential for both personal development and community livelihood.

The use of specialized equipment emerged as the most critical challenge, with high mean scores reflecting difficulty in handling sewing machines, kitchen tools, and other technical apparatus. This challenge is compounded by inadequate school facilities and limited training opportunities. Without proper equipment use, teachers cannot deliver meaningful hands-on lessons, which diminishes student engagement and undermines the subject's practical value.

Confidence and professional identity were also found to be weak among non-specialist teachers. Many expressed insecurity in teaching a subject outside their specialization, which affects their motivation and classroom delivery. This lack of confidence reinforces the perception that Home Economics is a secondary assignment rather than a professional identity, further marginalizing the subject.

Professional development needs were consistently high, showing that teachers themselves recognize their limitations and are eager for training. This is a positive finding, as it indicates openness to capacity-building initiatives. However, the absence of regular training programs and workshops leaves these needs unmet, perpetuating the cycle of inadequacy.

Perceived teaching effectiveness was moderate, reflecting resilience and adaptability among teachers despite systemic constraints. While they strive to deliver lessons, their effectiveness is limited by lack of specialization, inadequate resources, and weak confidence. This highlights the importance of institutional support to enhance teaching outcomes.

Objective 3 examined the relationship between demographic profiles and challenges. The results showed no significant relationship between gender, age, educational attainment, or years of teaching experience and the challenges faced. This suggests that difficulties are systemic rather than personal, affecting all non-specialist teachers regardless of background. However, field of specialization showed near-significant results, indicating that teachers from non-technical fields struggle more with content mastery, equipment use, and confidence compared to those with backgrounds closer to science or technology. This reinforces the conclusion that specialization is the most critical factor influencing challenges.

Overall, the discussion points to a structural issue in the education system: teachers are assigned to teach Home Economics without adequate preparation, training, or resources. This mismatch undermines the subject's role in equipping students with essential life skills and supporting community development

SURVEY QUESTIONNAIRE

Teaching Challenges of Home Economics Among Non-Specialist Teachers in Secondary Schools in Laoang, Northern Samar

Part I: Demographic Profile

(Please check or fill in the appropriate information)

1. Age: 1 (22–30) 2 (31–40) 3 (41–50) 4 (51+)
2. Gender: Male Female
3. Educational Attainment: Bachelor's Master's Doctorate
4. Years of Teaching Experience: 1 (1–3) 2 (4–6) 3 (7–10) 4 11+
5. Major/Field of Specialization: Non-HE HE-Specialist

Part II: Teaching Challenges Scale

A. Pedagogical Content Knowledge

	Very Low Challenge (1)	Low Challenge (2)	High Challenge (3)	Very High Challenge (4)
1. I feel confident teaching Home Economics concepts.				
2. I have sufficient knowledge of HE subject matter.				
3. I can explain HE topics clearly to students				
4. I find it difficult to prepare lesson plans for HE.				
5. I rely heavily on external resources (e.g., internet, textbooks) to teach HE.				

B. Use of Specialized Equipment

	Very Low Challenge (1)	Low Challenge (2)	High Challenge (3)	Very High Challenge (4)
6. I can effectively demonstrate the use of HE tools and equipment.				
7. I feel comfortable handling HE laboratory materials.				
8. I struggle with operating specialized HE equipment.				
9. I need assistance when conducting practical HE lessons.				
10. Lack of equipment hinders my ability to teach HE effectively				

C. Confidence and Professional Identity

	Very Low Challenge (1)	Low Challenge (2)	High Challenge (3)	Very High Challenge (4)
11. I feel competent teaching HE despite my specialization.				
12. I sometimes feel inadequate compared to HE specialists.				
13. Teaching HE affects my confidence as a teacher.				
14. I am motivated to improve my HE teaching skills.				
15. I believe my non-HE background limits my teaching effectiveness				

D. Professional Development Needs

	Very Low Challenge (1)	Low Challenge (2)	High Challenge (3)	Very High Challenge (4)
16. I need more training to teach HE effectively.				
17. I would benefit from workshops on HE pedagogy.				
18. Mentoring from HE specialists would improve my teaching.				
19. I am willing to attend professional development programs for HE.				
20. Continuous training is necessary for effective HE instruction				

Part III: Perceived Teaching Effectiveness Scale

	Very Low Challenge (1)	Low Challenge (2)	High Challenge (3)	Very High Challenge (4)
1. My students understand the lessons I teach in HE.				
2. I can engage students in practical HE activities.				
3. My teaching methods in HE are effective.				
4. Students perform well in HE under my instruction.				
5. I believe I contribute positively to student learning in HE
